Firebox T125

Includes IntelligentAV, 4x 1Gb and 1x 2.5Gb ports, with optional Wi-Fi 7 for smart, space-saving network protection

High-Speed Security, Especially Designed for Remote Sites

Engineered for today's agile workforces, the T125 combines advanced threat protection with SD-WAN compatibility, making it ideal for small sites, branch offices, and remote locations. It offers enterprise-level networking in a compact design, equipped with dual-band SMA antennas for wireless flexibility and 2.5 Gbps-capable interfaces for high-speed connectivity. With all logging and reporting features included at no additional cost, users gain access to over 100 dashboards and reports, including PCI and HIPAA standards.

We use WatchGuard firewalls at multiple locations. These models vary from small to large but we use the full security suite at all sites. These firewalls are easy to configure but offer exception value in the security elements that the full suite adds. This all comes at a cost point much lower than the competition.

Strong Security at Every Layer

Uniquely architected to be the industry's smartest, fastest, and most effective network security products, WatchGuard solutions deliver in-depth defenses against advanced malware, ransomware, botnets, trojans, viruses, drive-by downloads, data loss, phishing, and much more.

1 Throughput rates are determined using multiple flows through multiple ports and will vary depending on the environment and configuration. Max firewall throughput tested via direct connection using 1518-byte UDP frames based on RFC 2544 methodology. All testing performed on Fireware version 2025.1.

2 UTM throughput is measured using HTTP traffic with AV, IPS, and Application Control enabled, and does not account for all security services available on the appliance.
